

STAR PUBLIC SCHOOL

Dear Parents

Learn all this work properly.

Shapes patterns and symmetry

1. Perimeter is the distance around the outside of a shape.
2. There are two types of shape - regular and irregular.
3. Regular shape have all there sides equal in length. For example square, rectangle and equilateral

triangle are regular shapes.

4. Irregular shape: An irregular shape is a shape that does not have all sides of equal length.

5. Patterns in an arrangement of lines or shapes, desing in which the same shape/desing is repeated at regular intervals over a surface.

6. If an object/shape can be divided

DATE _____

into equal and similar halves, we
call the object symmetrical.

7. The line divided it into symmetrical
halves is called line of symmetrical.
